Homework 1

Task 1

a) Read a raw image

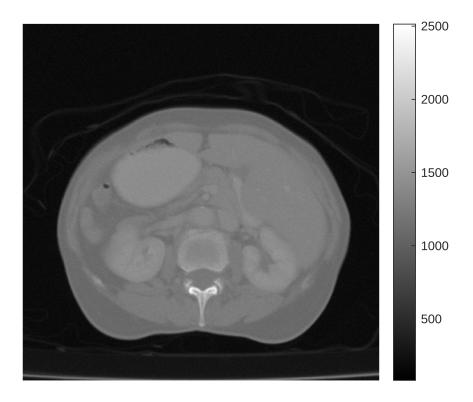

Read the image with:

- pixel size 512x512
- unsigned integer with 16 bits
- big-endian encoding

```
im_0069 = fread(fopen("data/IM_0069_rot.raw"), [512, 512], 'int16', 'ieee-
be');
```

b) Display the image with a colorbar

```
figure();
imshow(im_0069, []);
colorbar
```

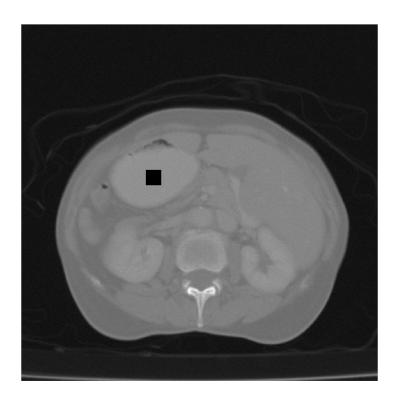

c) Measure the noise

Formula:

```
image_width = 614.4
image_width =
614.4000
pixel_width = 512
pixel_width =
512
pixel_size_mm = image_width / pixel_width
pixel_size_mm =
1.2000
measurement_width_mm = 24
measurement_width_mm =
24
measurement_width_pixel = measurement_width_mm / pixel_size_mm + 1
measurement_width_pixel =
21
measurement_pos_x = 210
measurement_pos_x =
210
measurement_pos_y = 180
measurement_pos_y =
180
```

This visualization is just added to show that a homogeneous area is chosen.

```
ma_marked_im_0069 = im_0069(:, :);
ma_marked_im_0069(measurement_pos_x:measurement_pos_x +
measurement_width_pixel, measurement_pos_y:measurement_pos_y +
measurement_width_pixel) = 1;
figure();
imshow(ma_marked_im_0069, [])
```

```
measurement_area_im_0069 = im_0069(measurement_pos_x:measurement_pos_x
+ measurement_width_pixel, measurement_pos_y:measurement_pos_y +
measurement_width_pixel);
measurement_area_im_0069_std = std(measurement_area_im_0069(:))

measurement_area_im_0069_std =
27.0400

measurement_area_im_0069_mean = mean(measurement_area_im_0069(:))

measurement_area_im_0069_mean =
1.4272e+03

im_0069_noise_estimation = measurement_area_im_0069_std /
measurement_area_im_0069_mean

im_0069_noise_estimation =
0.0189
```

Task 2

a + b) Implement subsampling to 256x256

```
subsampled_im_size_x = 256;
subsampled_im_size_y = 256;
```

First approach

```
tic;
subsampled_im_0069 = zeros(subsampled_im_size_x, subsampled_im_size_y);
for x = 1:subsampled_im_size_x
    for y = 1:subsampled_im_size_y
        pixel_sample = [im_0069(x * 2 - 1, y * 2 - 1), im_0069(x * 2 - 1, y
* 2), im_0069(x * 2, y * 2 - 1), im_0069(x * 2, y * 2)];
        subsampled_im_0069(x, y) = mean(pixel_sample);
    end
end
toc;
```

Elapsed time is 0.041895 seconds.

Second approach

```
tic;
subsampling_index_x = 1:2:size(im_0069, 1);
subsampling_index_y = 1:2:size(im_0069, 2);
subsampled_im_0069 = (im_0069(subsampling_index_x, subsampling_index_y)
+ im_0069(subsampling_index_x + 1, subsampling_index_y)
+ im_0069(subsampling_index_x, subsampling_index_y + 1) +
im_0069(subsampling_index_x + 1, subsampling_index_y + 1)) / 4;
toc;
```

Elapsed time is 0.004508 seconds.

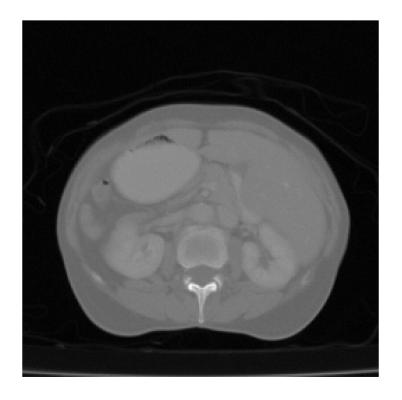

Time measurements

As expected, the second approach is much faster.

In one example run, approach one took 40 milliseconds while appraach two finished after 4 milliseconds.

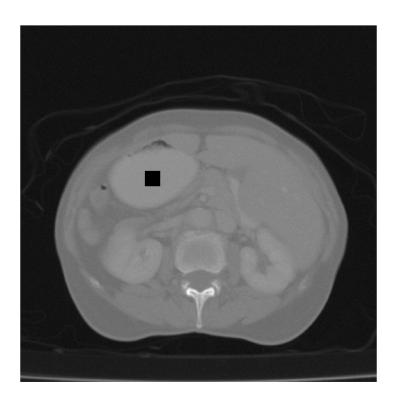

c) Display the subsampled image

```
figure();
imshow(subsampled_im_0069, []);
```

d)

```
ma_marked_substampled_im_0069 = subsampled_im_0069(:, :);
ma_marked_substampled_im_0069(measurement_pos_x / 2:measurement_pos_x +
int16(measurement_width_pixel / 2), measurement_pos_y:measurement_pos_y +
int16(measurement_width_pixel / 2)) = 1;
figure();
imshow(ma_marked_im_0069, [])
```

```
measurement_area_subsampled_im_0069 =
subsampled_im_0069(measurement_pos_x:measurement_pos_x +
int16(measurement_width_pixel / 2), measurement_pos_y:measurement_pos_y +
int16(measurement_width_pixel / 2));
measurement_area_subsampled_im_0069_std =
std(measurement_area_subsampled_im_0069(:))
measurement_area_subsampled_im_0069_std =
15.8190
measurement_area_subsampled_im_0069_mean =
mean(measurement_area_subsampled_im_0069(:))
measurement_area_subsampled_im_0069_mean =
1.0932e+03
subsampled_im_0069_noise_estimation =
measurement_area_subsampled_im_0069_std /
measurement_area_subsampled_im_0069_mean
subsampled_im_0069_noise_estimation =
0.0145
```

e) Caculate the noise reduction effect

(noise_original - noise_subsampled)/noise_original

noise_reduction_ratio = (im_0069_noise_estimation subsampled_im_0069_noise_estimation) / im_0069_noise_estimation

noise_reduction_ratio =
0.2362
